

January 7, 2021

Incorporated Village of Mineola  
PWS ID No. NY2902839  
MCL Deferral for 1,4-dioxane  
Quarterly Report – First Quarter 2021

## **Introduction**

On behalf of the Incorporated Village of Mineola (IVM or Village), D&B Engineers and Architects (D&B) has prepared this document in accordance with the requirements of the New York State Department of Health (NYSDOH) for public water suppliers who have been granted deferrals from maximum contaminant level (MCL) violations for 1,4-dioxane, PFOA, and/or PFOS. The Village was granted an MCL deferral for 1,4-dioxane, PFOA, and PFOS in 2020. The IVM was granted a deferral because it has been proactive in its efforts to establish and implement an action plan for managing the above-referenced compounds.

The enclosed is a report describing the IVM's progress towards maintaining the highest quality of water for our customers and meeting the deadlines set forth in the deferral approval. An updated schedule for these efforts is contained in **Attachment A**.

## **Corrective Action Plan Milestones – Well 4**

The Well 4 AOP project is currently in the design phase and the Village expects to submit a design report to the local and state health departments by February of this year. Detailed design of the facility is being completed simultaneously and documents are on schedule to be submitted in August. The pilot study report was completed last quarter. After submission, these documents have to be reviewed by the local regulatory agencies. Once this review is completed, the Village will then be able to conduct the public bidding process to award a contract for the treatment facility construction to begin.

It should be noted that, although the Village was granted a deferral for this facility, Well 4 was not operated at all last quarter and will only be used by the Village as a last-on, first-off well to handle an emergency condition.

## **Public Notification**

In accordance with the terms of the deferral, the Village notified the public of its MCL deferral in multiple ways. A link to the public notification document provided by the NYSDOH was posted on the Village website and Facebook page, and a postcard with a direct URL link to this document was sent out to all IVM customers. Documentation of such contact is contained in **Attachment B**.

## **Analytical Sampling**

Sample results for Well 4 taken during the fourth quarter of 2020 are contained in the below tables. Full laboratory reports for each sample are contained in **Attachment C**.

**1,4-dioxane (ppb)**

Well	Date		
	10/27/2020	11/17/2020	12/8/2020
Well 4 (N-3185)	0.58	0.53	0.50

**PFOA (ppt)**

Well	Date		
	10/27/2020	11/17/2020	12/8/2020
Well 4 (N-3185)	20.9	18.2	23.8

**PFOS (ppt)**

Well	Date		
	10/27/2020	11/17/2020	12/8/2020
Well 4 (N-3185)	7.8	6.2	6.4

**Conclusion**

As demonstrated above, the Incorporated Village of Mineola is actively working to preserve the quality of water for its customers and comply with the requirements put forth by the NYSDOH. The Village looks forward to continuing to work towards completion of its treatment facilities.

Should you have any questions, please contact the Village at 516-746-0750 or visit the website, [www.mineola-ny.gov](http://www.mineola-ny.gov).

Very truly yours,

Board of Trustees  
Incorporated Village of Mineola

### Village of Mineola

December 14, 2020 at 11:29 AM ·

**Department of Public Works  
Water Division**

**Department of Public Works  
Water Division**

#### IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER DEFERRAL Issued for PFOA, PFOS and 1,4-Dioxane in the Village of Mineola

##### Are you receiving this notice/information?

You are receiving this notice because testing of our public water system found the following levels of perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS) and 1,4-dioxane in your drinking water above New York State's maximum contaminant level (MCL). The MCLs are set well below levels known to cause health effects in animal studies. Therefore, consumption of water with PFOA, PFOS or 1,4-dioxane at the level detected does not pose a significant risk. Your water continues to be acceptable for all uses.

The Village of Mineola has submitted, and the New York State Department of Health (NYSDOH) has issued, a deferral to the Village of Mineola. When a public water system is issued a deferral, the water system agrees to a schedule for corrective action and compliance with the new MCLs. In exchange, the Department agrees to defer enforcement actions, such as assessing fines, if the water district is meeting the agreed-upon deadlines. We are required to update the Department and the Nassau County Department of Health each calendar quarter on the status of our projects. Once we meet the agreed-upon deadlines, the Department can resume enforcement actions.

##### Are there health effects of PFOA and PFOS?

Available information on the health effects associated with PFOA and PFOS, two chemicals, comes from studies of high-level exposure in animals or humans. Information about the chances of health effects occurring from lower levels of exposure is less certain. Testing of drinking water prompts water suppliers and regulators to take precautions to inform consumers and steps to reduce exposure.

At the level of PFOA and PFOS detected in your water, exposure from drinking water and food preparation is well below PFOA and PFOS exposures associated with health effects.

##### What are the health effects of 1,4-dioxane?

Laboratory studies show that 1,4-dioxane caused liver cancer in animals exposed at high levels throughout their lifetime. Other types of cancer have also been reported, although less commonly than liver cancer. There is no evidence of 1,4-dioxane cancer effects in humans. The U.S. Environmental Protection Agency considers 1,4-dioxane a likely human carcinogen based upon studies of animals exposed to high levels of this chemical over their entire lifetimes.

At the level of 1,4-dioxane detected in your water, exposure from drinking water and food preparation is well below 1,4-dioxane exposures associated with health effects.

##### What is New York State doing about PFOA, PFOS and 1,4-Dioxane in public drinking water?

The New York State Department of Health (NYS DOH) has adopted a drinking water regulation that requires all public water systems to test for PFOA, PFOS and 1,4-dioxane. If found above the MCLs, the water supplier must take steps to lower the level to meet the standard. Exceedances of the MCL signal that steps should be taken by the water system to reduce contaminant levels.

##### What is being done to remove these contaminants?

The Village of Mineola has prepared and begun to implement an action plan which includes the design and construction of an Advanced Oxidation Process (AOP) treatment system for the removal of 1,4-dioxane at the Well No. 4 site. This system also includes the Activated Carbon filter for the removal of PFOA and PFOS. In addition, the Village recently completed the construction of a GAC facility at Well No. 7 for the removal of PFOA and PFOS. Additional information will be shared as further testing and progress occurs. This process is similar for any chemical detected in public drinking water that requires mitigation. The compliance timetable will ensure that your drinking water will meet the MCL as rapidly as possible. The deferral is effective until

**Department of Public Works  
Water Division**

##### Where can I get more information?

For more information regarding this deferral, please contact Thomas Rini, Superintendent of Public Works at (516) 746-5291 or at 155 Washington Avenue, Mineola, NY, or the Water Division at (516) 746-0751. You may also request a paper or email copy of this notice by contacting [villageofmineola@nassaucountyny.gov](mailto:villageofmineola@nassaucountyny.gov). You may also contact the Nassau County Department of Health at (516) 227-6097.

## Department of Public Works Water Division

**The Village of Mineola Water Division has been granted a compliance deferral by the New York State Department of Health for the recently created 1,4-dioxane and the PFOA and PFOS contaminant regulations.**

**To learn more about what this deferral means and the proactive steps the Village of Mineola Water Division has and continues to take to address the detection of these contaminants, please visit**

## Department of Public Works Water Division

### **IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER Deferral Issued for PFOA, PFOS and 1,4-Dioxane in the Village of Mineola**

#### **Why are you receiving this notice/information?**

You are receiving this notice because testing of our public water system found the chemicals perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS) and 1,4-Dioxane in your drinking water above New York State's maximum contaminant level (MCL) of 10 ppt for PFOA/PFOS and 1 ppb for 1,4-dioxane. The MCLs are set well below levels known to cause health effects in animal studies. Therefore, consuming water with PFOA, PFOS or 1,4-dioxane at the level detected does not pose a significant health risk. Your water continues to be acceptable for all uses.

The Village of Mineola has submitted, and the New York State Department of Health (Department) has issued, a deferral to the Village of Mineola. When a public water system is issued a deferral, the water system agrees to a schedule for corrective action and compliance with the new MCLs. In exchange, the Department agrees to defer enforcement actions, such as assessing fines, if the water district is meeting the established deadlines. We are required to update the Department and the Nassau County Department of Health each calendar quarter on the status of our projects. If we do not meet the agreed upon deadlines, the Department can resume enforcement.

#### **What are the health effects of PFOA and PFOS?**

The available information on the health effects associated with PFOA and PFOS, like many chemicals, comes from studies of high-level exposure in animals or humans. Less is known about the chances of health effects occurring from lower levels of exposure, such as those that might occur in drinking water. As a result, finding lower levels of chemicals in drinking water prompts water suppliers and regulators to take precautions that include notifying consumers and steps to reduce exposure.

PFOA and PFOS has caused a wide range of health effects when studied in animals that were exposed to high levels. Additional studies of high-level exposures of PFOA and PFOS in people provide evidence that some of the health effects seen in animals may also occur in humans. The most consistent findings in animals were effects on the liver and immune system and impaired fetal growth and development. The United States Environmental Protection Agency considers PFOA and PFOS as having suggestive evidence for causing cancer based on studies of animals exposed to high levels of this chemical over their entire lifetimes.

## **Department of Public Works Water Division**

At the level of PFOA and PFOS detected in your water, exposure from drinking water and food preparation is well below PFOA and PFOS exposures associated with health effects.

### **What are the health effects of 1,4-dioxane?**

Laboratory studies show that 1,4-dioxane caused liver cancer in animals exposed at high levels throughout their lifetime. Other types of cancer have also been reported, although less consistently than liver cancer. There is no evidence of 1,4-dioxane cancer effects in humans. The United States Environmental Protection Agency considers 1,4-dioxane a likely human carcinogen based upon studies of animals exposed to high levels of this chemical over their entire lifetimes.

At the level of 1,4-dioxane detected in your water, exposure from drinking water and food preparation is well below 1,4-dioxane exposures associated with health effects.

### **What is New York State doing about PFOA, PFOS and 1,4-Dioxane in public drinking water?**

The New York State Department of Health (NYS DOH) has adopted a drinking water regulation that requires all public water systems to test for PFOA, PFOS and 1,4-dioxane. If found above the MCLs, the water supplier must take steps to lower the level to meet the standard. Exceedances of the MCL signal that steps should be taken by the water system to reduce contaminant levels.

### **What is being done to remove these contaminants?**

The Village of Mineola has prepared and begun to implement an action plan which includes the design and construction of an Advanced Oxidation Process (AOP) treatment system for the removal of 1,4-dioxane at the Well No. 4 site. This system also includes Granular Activated Carbon (GAC) for the removal of PFOA and PFOS. In addition, the Village recently completed the construction of a GAC facility at Well No. 7 for the removal of PFOA and PFOS. Additional information will be shared as further testing and progress occurs. This process is similar for any chemical detected in public drinking water that requires mitigation. The compliance timetable will ensure that your drinking water will meet the MCL as rapidly as possible. The deferral is effective until August 25, 2022.

## Department of Public Works Water Division

### Where can I get more information?

For more information regarding this deferral, please contact Thomas Rini, Superintendent of Public Works at (516) 746-5291 or at 155 Washington Avenue, Mineola, NY, or the Water Division at (516) 746-0751. You may also request a paper or email copy of this notice by contacting [info@mineola-ny.gov](mailto:info@mineola-ny.gov). You may also contact the Nassau County Department of Health at (516) 227-9697.

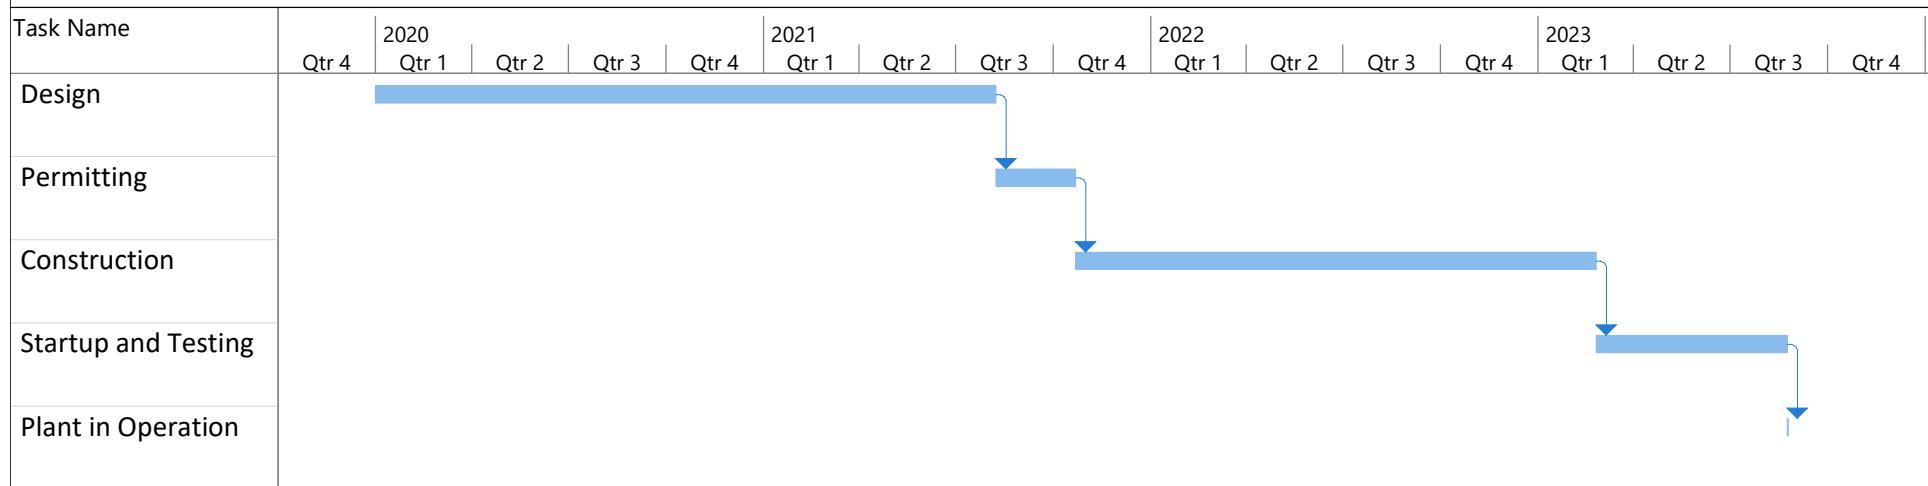

If you have additional questions about these contaminants and your health, talk to your health care provider who is most familiar with your health history and can provide advice and assistance about understanding how drinking water may affect your personal health.

RE: Project: PFAS/1,4-DIOX/POC/NO3 10/27  
Pace Project No.: 70151133

Dear James Martin:

Enclosed are the analytical results for sample(s) received by the laboratory on October 27, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville
- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Stu Murrell

## QUALIFIERS

Project: PFAS/1,4-DIOX/POC/NO3 10/27  
Pace Project No.: 70151133

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
- D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
- IH This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- N3 Accreditation is not offered by the relevant laboratory accrediting body for this parameter.

RE: Project: WELL 4 11/17  
Pace Project No.: 70153789

Dear James Martin:

Enclosed are the analytical results for sample(s) received by the laboratory on November 17, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville
- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Stu Murrell  
stu.murrell@pacelabs.com

## QUALIFIERS

Project: WELL 4 11/17

Pace Project No.: 70153789

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- IH This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- N3 Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
- v1 The continuing calibration verification was above the method acceptance limit. Any detection for the analyte in the associated samples may have a high bias.

RE: Project: 1,4 DIOX/ PFOA/NO3/POC 12/8  
Pace Project No.: 70155949

Dear James Martin:

Enclosed are the analytical results for sample(s) received by the laboratory on December 08, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Melville
- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jennifer Aracri

## QUALIFIERS

Project: 1,4 DIOX/ PFOA/NO3/POC 12/8

Pace Project No.: 70155949

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### SAMPLE QUALIFIERS

Sample: 70155949001

[1] 1j=A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume

### BATCH QUALIFIERS

Batch: 689331

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 691140

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

### ANALYTE QUALIFIERS

1j A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

IL This analyte exceeded secondary source verification criteria low for the initial calibration. The reported results should be considered an estimated value.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

## QUALIFIERS

Project: 1,4 DIOX/ PFOA/NO3/POC 12/8  
Pace Project No.: 70155949

---

### ANALYTE QUALIFIERS

- N3 Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
- S0 Surrogate recovery outside laboratory control limits.
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples.
